

BRAIN BOOSTER

INNOVATIVE INGREDIENTS FROM SARDINE-BASED MARINE CO-PRODUCTS FOR HUMAN AND PET HEALTH AND NUTRITION

The Brain Booster project is aimed at perfecting high value-added innovative health ingredients derived from marine co-products (sardines) for the nutraceutical and pet food markets and, more particularly, for the healthy aging market.

The innovative aspect focuses principally on defining complex ingredients capable of acting on the global parameters of 'healthy aging' - memory, spatial performance and maintaining good quality of life for both humans and household pets (cats and dogs).

Brain Booster aims to contribute to building a sustainable industrial sector developing high value-added marine co-products at a regional level.

The BRAIN BOOSTER project is recognised jointly by the clusters Pôle Mer Bretagne Atlantique and Pôle Valorial.

Partners

Companies

ABYSS Ingrédients, Caudan et Quimper [\[Project Developer\]](#)
Chancerelle, Douarnenez
Diana Pet Food Vivae, Elven

Research centers

CNRS LEMAR UMR 6539 et le laboratoire domaines océaniques, UMR 6538 UBO, Brest
